

SAP Launcher – Manual

The SAP Launcher is a small tool that allows you to control which database is the default for the SAP Business One welcome-screen.

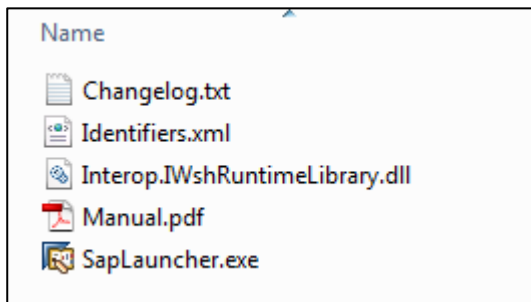

This is very handy for companies that have multiple databases, and these companies can instead of having one shortcut to SAP Business One, create shortcuts directly to specific companies.

Setup

The SAP Launcher tool contains 4 files where the SapLauncher.exe is the most important to you

In order to use it on a machine you should make a copy of the folder and place it in on your local machine (the tool does not support being executed from a shared folder/path).

Once copied you can start registration of companies you want as shortcuts.

Configuration

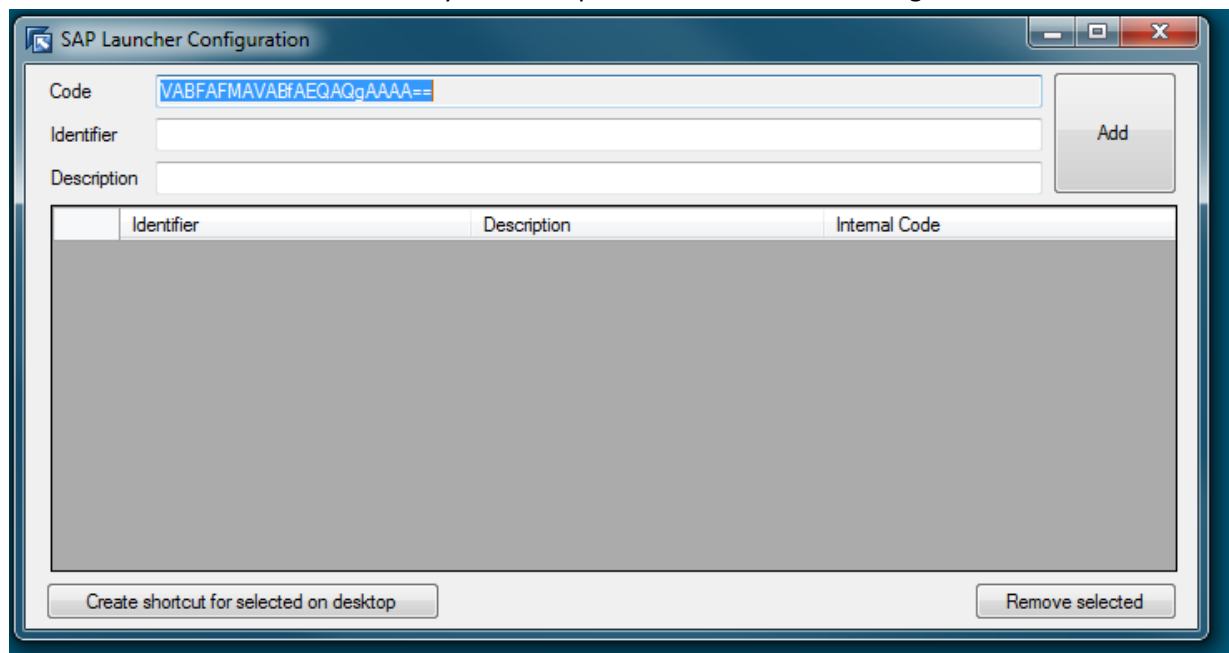

Because SAP have encrypted the data about what is the default company, the systems configuration follows a learning by doing principle. You therefore need to do the following sequence to register a new company.

Step 1 – Start SAP Business One in the database you want to use and close it again

- This is simple. Log into your intended company and close SAP (this way the default company just now is the intended database)

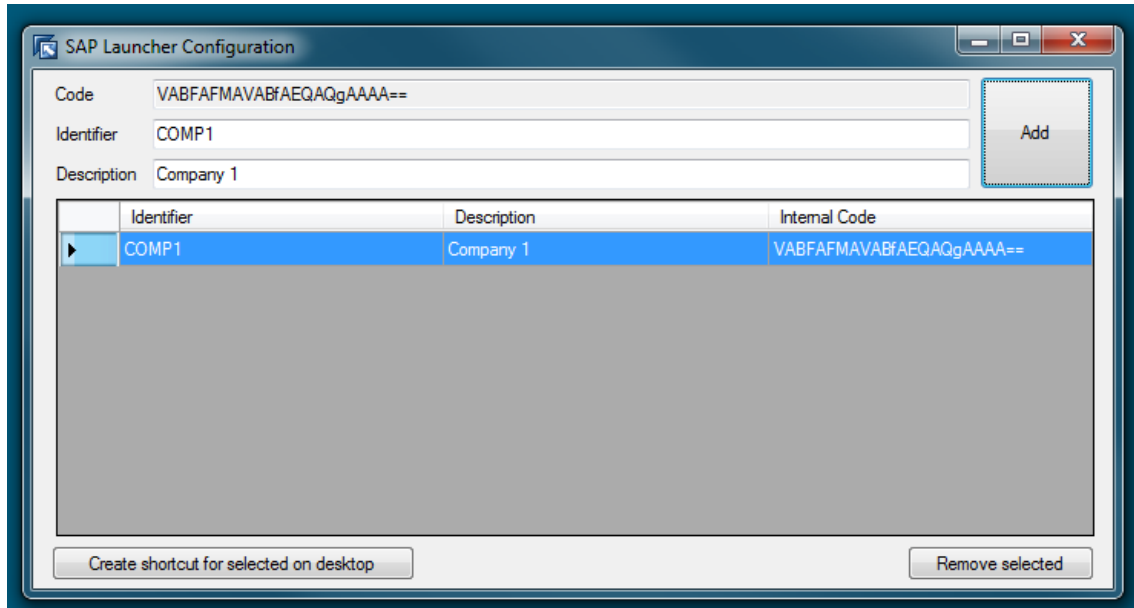

Step 2 – Start SAP Launcher and add company

- Now start the SAPLauncher.exe and you will be presented with the following screen

- The code displayed is the encrypted version of the currently logged in... It is now your job to provide an more descriptive identifier and description.
- This is done by filling out the two fields and press Add.
 - o The identifier is a more simple code. Please do not use special chars or spaces in it

- The description is the name of the company that will be used in the shortcut

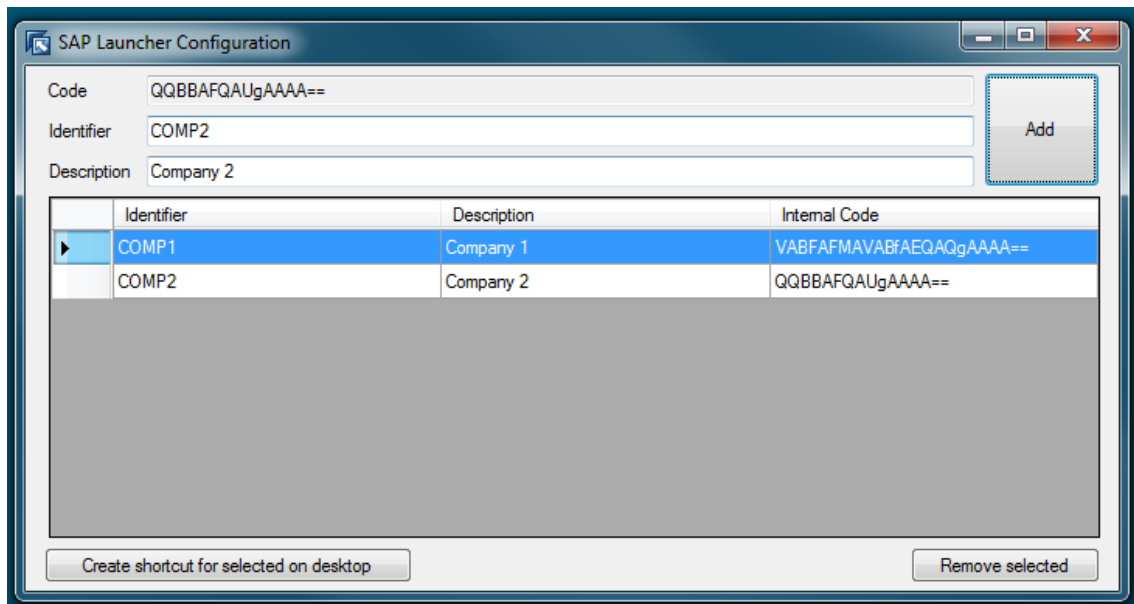

- Now close the program and repeat the step 1 and 2 for each company you want a shortcut for

Step 3 – Create shortcuts

Once you have all the databases you need it is time to create the shortcuts.

- Open the SAP Launcher

- Highlight the company you want to make the shortcut for and press “Create shortcut for selected on desktop”.
- This creates a desktop shortcut with name “SAP Business One - <Your provided description>” and you can repeat the steps for each company

TIP: YOU CAN MOVE AND RENAME THE SHORTCUTS IF YOU DO NOT WISH THEM BEING ON THE DESKTOP
